

## International Systems Research Co. joins Google Enterprise Professional Program

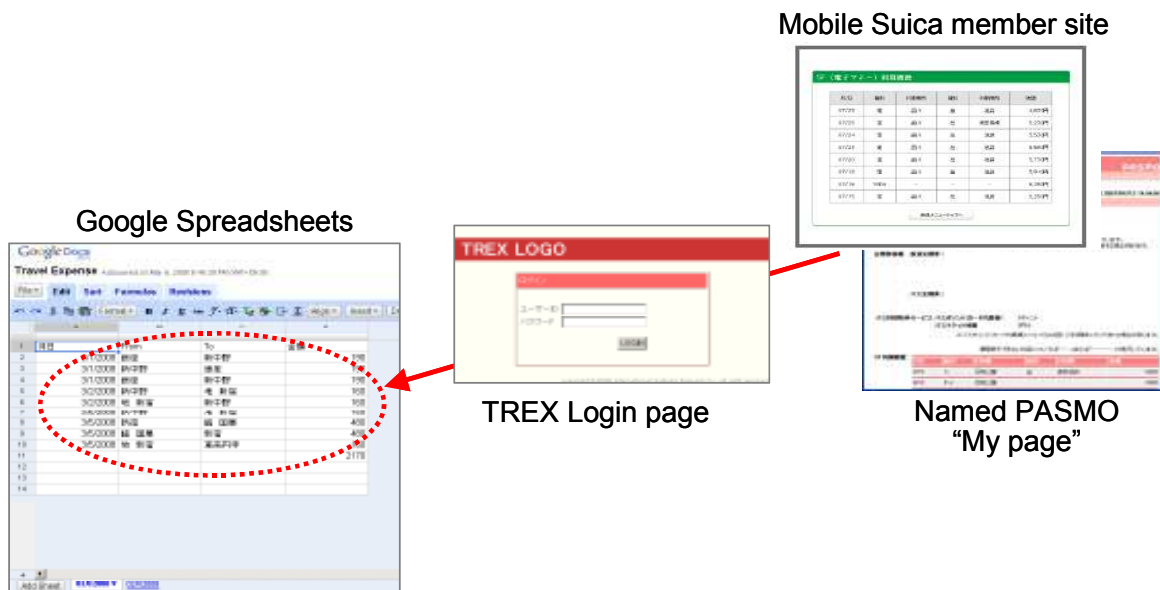

### FOR IMMEDIATE RELEASE:

Tokyo, March 13, 2008 - International Systems Research Co. (ISR), Tokyo-based developer of next-generation web technology announced today that it has joined the Google Enterprise Professional™ program. ISR's partnership will allow customers to enhance the power and cost effectiveness of Google Apps™ for their enterprise. ISR intends to offer custom solutions for their customers based on Google Apps as well as ready to use applications that will be easy to deploy for any enterprise.

ISR is also announcing the development of a Travel Expense Report Solution (TREX) based on Google Apps and Felica technology that will enable customers to quickly process travel reports. Current systems require manual entry and record keeping to report travel expenses, demanding significant labor resources each month. TREX will automatically populate Google Spreadsheets™ with the users Suica/PASMO travel history, allowing for easy editing, collaboration approval and verification. ISR will deploy this solution as an on-demand application, so customers will be able to access it from their Google Start Page. The TREX solution will be targeted to SaaS(ASP) service providers.

"Our Travel Expense Solution is a great addition for any company using Google Apps. It allows for automatic Travel expense report generation, saving time and money," says ISR Architect Andrew McNaughton. "Continuing on this theme, we plan on delivering more solutions for enterprises that want to leverage the cost effectiveness of Google Apps and Software-as-a-Service applications."

Google Apps brings simple, powerful communication and collaboration tools to organizations. With Google Apps, users can use tools such as Gmail™ web services, Google Calender™ shared calendaring, and Google Docs & Spreadsheets™ on their own domain to work together more effectively. Best of all, it's all hosted by Google, so there's no hardware or software to download, install or maintain.

### Images of TREX

This is under developing therefore function will be change.

The Google Enterprise Professional program includes developers, consultants and independent software vendors that provide value-added services for Google enterprise products.
